

- Log into SAT1 : 192.168.100.11 (user/pass = nos3/nos3123!)
- ./start.sh in github-nos3 folder

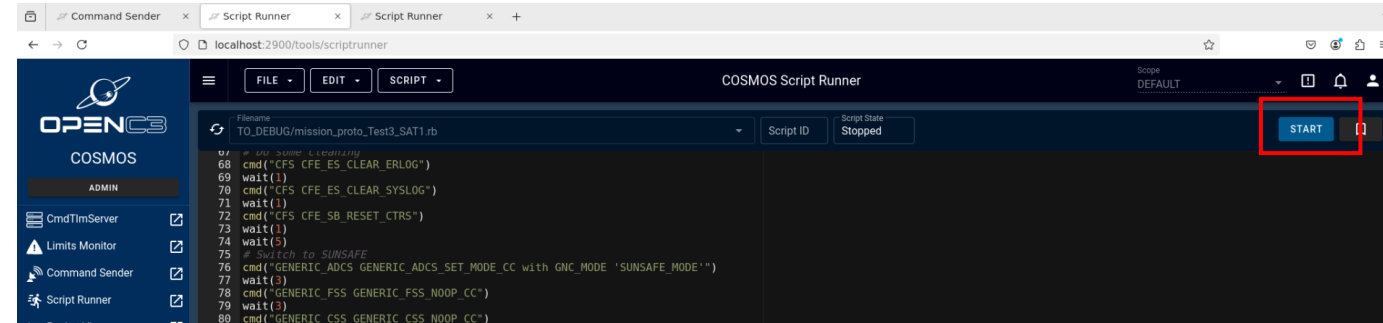

- Log also into VM MCS : 192.168.100.5 and VM VISU : 192.168.100.42
- Wait for FSW, COSMOS and NASA 42 to be up and running (1-2min)

Here an example from VISU VM (NASA 42) :

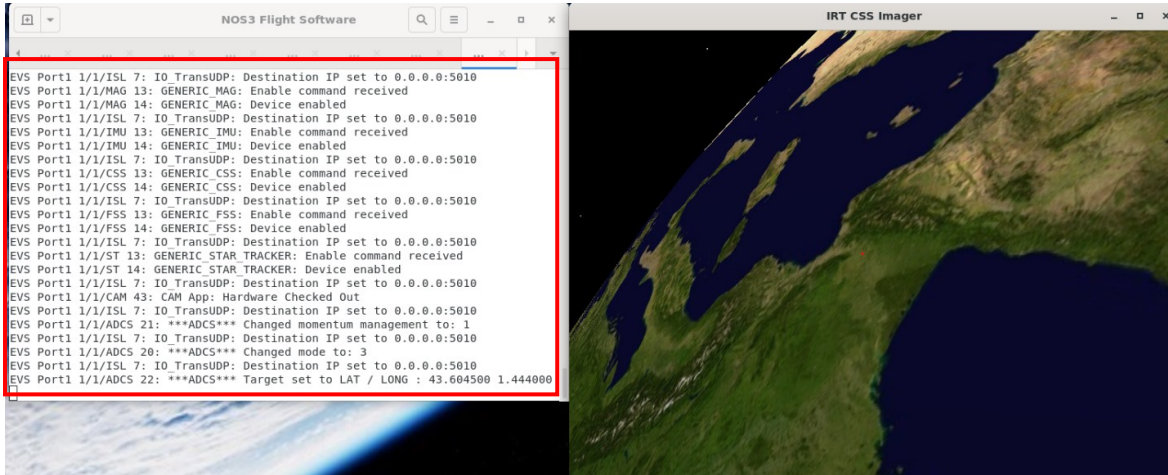

- When the simulator is ready (1-3min), log into VM MCS and launch the mission (START)

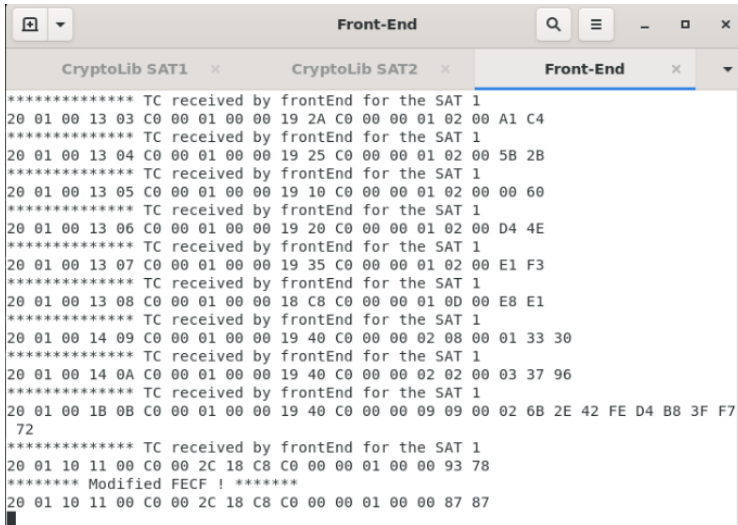

- Check the mission is running

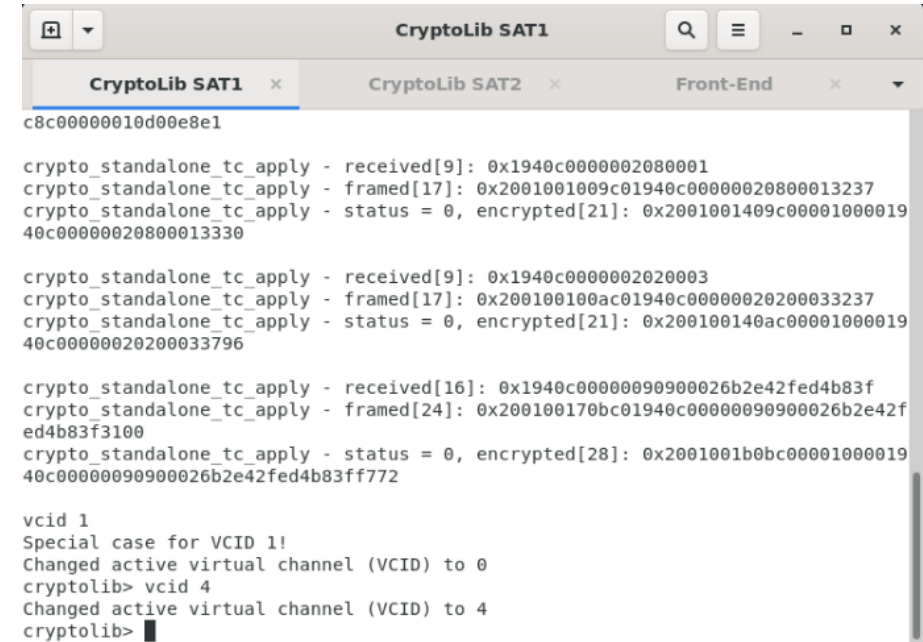

- In VM SAT you will see the TC are received and executed by the FSW
- The Imager will start updating when the satellite is in Normal mode (mode 3)

- In VM MCS you can check the TC flow via the Front-End

- In VM MCS you can activate encryption by using “vcid 4” in CryptoLib tab.

- You can test attacks in folder CSS_Attacks.
